1 Introduction

Hello, this is my first latex practical.

This is the first paragraph.

This is the second paragraph.

This is line one.

This is line two.

”This is quoted text.”

Dashes : - – —

Hello Mr. Buttler

Special Symbols: # \$ % & - { } ~

Example : I scored 96.2% in my class X boards.

May 5, 2026

L^AT_EX

T_EX

Text Styles : *Hello* (Italic) **Hello** (Bold) Hello (Underline)

*hermeneutics*¹

¹Hermeneutics: the theory and methodology of interpretation, especially of biblical texts, wisdom literature, and philosophical texts.

2 Introduction

This is the Introduction Section.

This is a short quotation.

2.1 Sub Section : List

Unordered List

Stationary

- Pencil
- Pen
- Highlighter
- Scale

Ordered List

1. Mathew
2. Stephen
3. George

Description List

Pen A Stationary

Stephen A Name

2.2 Displaying Formulas

$$[a + b]^2 = a^2 + b^2 + 2ab$$
$$u^2 + v^2 = 2at$$

3 Introduction

Running LaTeX, Changing the type style, Accents, Symbols, Subscripts and Superscripts, Fractions, Roots, Ellipsis.

3.1 Type Style

Latex, *Latex*, **Latex**, L^AT_EX

3.2 Accents

á , â, ä, ã, à, ā, ȁ, ă, ǎ

3.3 Symbols

\$ % & - { }

$\alpha, \beta, \gamma, \leq, \geq, \neq, \infty, \partial, \nabla, \rightarrow$

3.4 Subscripts and Superscripts

Subscript: a_1, b_2 , Superscript: x^2, y^2 , Both: n_{ij}^2

3.5 Fractions

$\frac{a}{b}, \frac{x+1}{y-1}$

3.6 Roots

$\sqrt{x}, \sqrt[n]{x}, \sqrt{a^2 + b^2}$

3.7 Ellipsis

$1, 2, 3, \dots, n$

$a_1 + b_2 + \dots + a_n$

4 Introduction

Mathematical Symbols, Greek letters, Calligraphic letters, Log-like functions, Arrays, The array environment, Vertical alignment, Delimiters, Multiline formulas.

4.1 Mathematical Symbols

$\leq, \geq, \neq, \approx, \equiv, \in, \notin, \subset, \subseteq, \cup, \cap, \forall, \exists, \rightarrow, \Rightarrow, \infty, \partial, \nabla$

4.2 Greek Letters

$\alpha, \beta, \gamma, \delta, \epsilon, \lambda, \mu, \pi, \sigma, \theta, \omega, \Gamma, \Delta$

4.3 Calligraphic Letters

$\mathcal{L} = \mathcal{F}(x)$

4.4 Log-like Functions

$\log x, \ln x, \sin x, \cos x, \tan x, \exp x, \max, \min$

4.5 Arrays

$$\begin{array}{ccc} 1 & 2 & 3 \\ 3 & 4 & 4 \\ 5 & 6 & 5 \end{array}$$

4.6 The Array Environment

$$\begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}$$

4.7 Vertical Alignment

$$\begin{array}{rcl} x + y & = & 1 \\ x - y & = & 2 \end{array}$$

4.8 Delimiters

$$\left(\frac{a}{b}\right)$$
$$\left(\frac{x+1}{y-1}\right)$$

4.9 Multiline Formulas

$$x + y = 1 \tag{1}$$

$$x - y = 2 \tag{2}$$

$$x + y = 1 \tag{3}$$

$$x - y = 2 \tag{4}$$

5 Introduction

Putting one thing above another, Over and underlining, Accents, Stacking symbols, Spacing in math mode, Changing style in math mode, Type style, Math style.

5.1 Putting One Thing Above Another

$$\stackrel{def}{=} \lim_{n \rightarrow \infty}$$

5.2 Over and Underlining

$$\bar{z} = x - iy$$

ResearchMethodology

5.3 Accents

$$\hat{x} + \vec{y}$$

5.4 Stacking Symbols

$$A \stackrel{def}{=} B$$

5.5 Spacing in math mode

$$a\,b \quad a\,b \quad \mathcal{O}$$

5.6 Changing Style in Math Mode

$$\frac{a}{b} \quad \frac{a}{b}$$

5.7 Type Style

$$\mathbf{v}, \mathcal{F}$$

5.8 Math Style

$$\sum_{i=1}^n x_i \quad \sum_{i=1}^n x_i$$

6 Introduction

Defining commands, Defining environments, Theorems.

6.1 Defining Commands

Set of Real Numbers: $\mathcal{R}$

$$\sqrt{x} + y^2$$

6.2 Theorems

Theorem 6.1 *Every non-empty subset of that is bounded above has a supremum (least upper bound) in $\mathcal{R}$*

Theorem 6.2 *Between any two real numbers, there exists a rational number.*

Theorem 6.3 *All even numbers are divisible by 2.*

Lemma 1 *2 divides 10.*

6.3 Algebra

Theorem 6.4 $a + b = b + a$

7 Introduction

7.1 Figures and Tables

Figure 1: Sample Figure

A	B
1	2

Table 1: Sample Table

7.2 Marginal Notes

This is a sample text.

Note in margin

7.3 Tabbing Environment

Name	Age	City
Ram	20	Delhi
Shyam	22	Mumbai

7.4 Tabular Environment

Name	Age	City
Ram	20	Delhi
Shyam	22	Mumbai

7.5 Cross-References

See Section 1

8 Bibliography and Citation

A ring of endomorphisms of a module plays a very important role in many parts of mathematics [1]. As a generalization of this idea, we can consider homomorphisms between modules [1].

Further developments in ring theory and related problems were studied extensively in later works [2].

We can also cite multiple references together when needed [1, 2].
